# WEATHER OF CONCERN

## **Weather of Concern**

- Scattered showers and a few thunderstorms will continue across Northern California today. The transition to a drier weather pattern is forecast to begin Tuesday.
- A cold low pressure system will continue to impact southwest California today, with heavy downpours, isolated thunderstorms, and heavy snow accumulations in the mountains. The entire area is under a Flash Flood Watch, while the Mountains of Los Angeles, Ventura, and Santa Barbara Counties remain under a Winter Storm Warning. Potential impacts include the possibility of flash flooding for all areas due to heavy downpours and isolated thunderstorms, debris flows for recent burn areas, rock and mudslides along canyon roads, urban and small stream flooding, significant travel delays, downed trees and isolated power outages, and dangerous winter driving conditions in the mountains. Snow levels are expected to lower to around 4000 feet, which may result in accumulating snow on the Grapevine, possibly resulting in a closure of the I-5 near the Tejon Pass.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

## **WEATHER SYNOPSIS BY REGION**

### **NORTHERN CALIFORNIA**

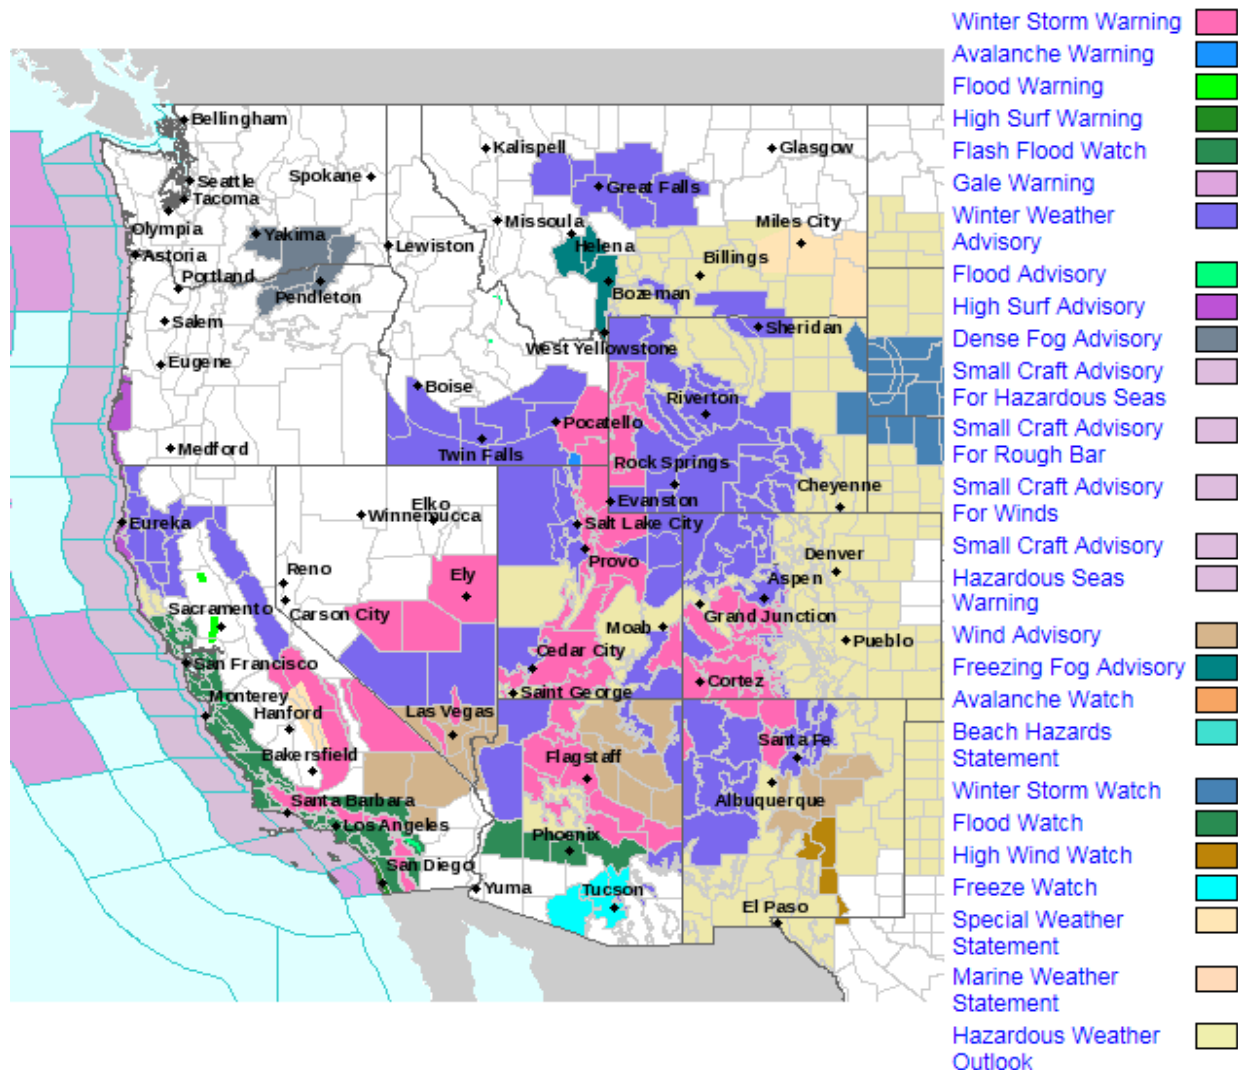

Upper trough moves overhead Northern California today with scattered showers and a few thunderstorms. Snow has decreased across the northern Sierra since Sunday evening, and additional snowfall accumulations today are expected to be much lighter than over the weekend as off and on snow showers continue through the day. Some light snowfall accumulations will also be possible down into the foothills as snow levels are around 2-3K ft.

### **SOUTHERN CALIFORNIA**

The remains of a Pacific storm will bring showers and isolated thunderstorms to the region through this afternoon. Isolated showers will continue tonight through Tuesday afternoon on the back side of the storm. Most foothill and mountain locations will receive an additional half inch to an inch of rainfall and most coastal and valley locations will receive an additional quarter inch to half inch of rainfall with this storm. The snow level will be between 3,000 and 4,000 feet. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas through tonight. Temperatures will be 10 to 15 degrees below normal through Tuesday, with upper 20s and 30s across the mountains and mid 40s to mid 50s in the valleys. Temperatures will warm some Wednesday and Thursday, but remain below normal as a weak trough approaches and moves inland across Northern California. This trough will bring a few showers north of a Monterey/Fresno County line Wednesday night through Thursday afternoon. A strong ridge of high pressure will build into California from the Pacific Ocean bringing significant warming and low humidity away from the San Joaquin Valley Friday through this weekend. Temperatures will warm to 5 to 10 degrees above normal and minimum humidity will drop into the single digits and teens this weekend. North to east winds of 20 to 40 mph with gusts to 60 mph will surface across the mountains and below the canyons and passes of Southern California Friday morning through this weekend.
